Hoistable Clothing

Klip2Lift Hoistable Clothing is a new type of moving and handling device to assist people with limited mobility.

Klip2Lift Hoistable Clothing consists of a trendy, unobtrusive waistcoat that can be worn throughout the day. This can then be used with the optional hoist loops and leg sections that allow the user to be clipped onto any hook and loop fixing hoist if required. This innovative discreet design is a development in "Hoistable Clothing" and has been successful in being granted a patent (GB2432297).

The Klip2Lift Jacket can be used with the detachable straps for supported walking with a hoist where risk assessed as safe to do so. The Klip2Lift may be used for gait training, direction control and rehabilitation purposes.

A truly versatile piece of equipment, adaptable to the changing needs of the user.

The Klip2Lift Jacket can also be used without the hoist straps for manual supported walking. Handles positioned around the perimeter of the jacket aid controlled assistance when standing, walking or when direction control is required.

Using the handles on the Jacket is much more dignified for the user.

ADVANTAGES

Klip2Lift may be a more suitable option for safe lifting for people with the following difficulties:

- Fear of being lifted using traditional slings
- Clients with anxiety disorders or behaviours that challenge
- Frequent fallers or children who often “go to the floor”
- Clients needing to be lifted to facilitate dignified personal care
- Clients who become agitated and “wriggle” out of traditional slings
- Clients needing to be hoisted to use standing frames or walkers
- Schools etc. whereby many people need hoisting in a short timeframe
- Clients who access rebound therapy
- Clients who access hydrotherapy/swimming pools
- May be considered as an alternative for a leave in sling

KEY FEATURES

- Available in 7 sizes
- Maximum user weight 130kg
